

GRM 80P hybride

Stamping and Forming Machine

Mechanics meets servo technology

Benefit from the advantages of mechanics and servo technology on one machine – high dynamic and maximum flexibility. Manufacture your precision stamped and formed parts and assemblies significantly more productive and cost-effective with the hybrid GRM 80P hybride stamping and forming machine.

- Integration of several servo axes for easier tooling solutions
- Central servo dies for complete setup from machine front side
- More than 2,100 mm (82") machining path with linear tools
- Servo feeder RZV 2.1 for highly dynamic, precise material feed
- Rigid 400 kN press for high-performance carbide tools
- Excellent accessibility to all processing stations
- Easy and secure operation with VariControl system
- High production speeds up to 250 1/min.
